**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishiguchi et al., JP 2003082172 (hereinafter "Nishiguchi" in view of Rodway et al, WO 02/073631 (hereinafter "Rodway"). Nishiguchi teaches a non-crosslinked composite comprising polypropylene, metal hydrate, hindered phenolic antioxidant and sulfur antioxidant and in the quantities

Art Unit: 1796

prescribed by the present invention. See Nishiguchi, Abstract; ¶¶ [0001-0007]. Nishiguchi differs from the present invention in that the present requires a metallic oxide and imidazole based sulfur antioxidant. Rodway teaches in analogous art a wire and cable insulation based on polypropylene composition comprising mercaptobenzimidazole and zinc oxide. See Roday, Abstract; pages 1 & 2.

4. In recently decided *KSR Int'l Co. v. Teleflex, Inc.*, the Supreme Court unanimously stated "the combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable result." In view of Rodway, one having an ordinary skill in the art would be motivated to modify Nishiguchi by using an antioxidant and zinc oxide because both references are directed to propylene composition based wire and cable insulation. Such modification would be obvious because one would expect that the use of additives taught by Nishiguchi would be similarly useful and applicable to the additives taught in Rodway.
